

On-demand **Bioanalytical Services**

Reliable and timely results to support
your drug development journey

On-demand Bioanalytical Services

Ensure asset optimization and risk management throughout your drug development journey by securing a fit-for-purpose bioanalytical strategy.

Mercodia is a trusted bioanalytical service partner with over 30 years of experience in immunoassay development and manufacturing.

We offer services for preclinical and clinical studies using proprietary immunoassays and other ligand-binding assays for pharmacokinetics, pharmacodynamics, immunogenicity, and biomarker analysis of proteins, peptides, and oligonucleotides.

Additional services include development and validation of custom and commercially available assays.

Our expert team of scientists designs cost- and time-effective bioanalytical strategies to guarantee that you obtain the right data at the right time at all project stages.

We use a wide range of tools and platforms including ELISA, MesoScale Discovery (MSD) technology, and surface plasmon resonance (SPR) using Biacore™ technology.

Mercodia has bioanalytical testing sites in Sweden and the United States, and is fully compliant with Good Laboratory Practice (GLP) and conform to relevant regulatory guidelines from the ICH, EMA and FDA.

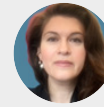

The Mercodia team worked diligently in our project and delivered reliable data when we needed it. It was easy to collaborate with such an expert team of scientists and we look forward to more exciting projects together.

The very experienced bioanalytical scientists at Mercodia have become an integral part of the Annexin team. Together, we share scientific curiosity and critical thinking while never compromising on the quality of data.

Annexin Pharmaceuticals AB

Biomarker analysis

Fit-for-purpose biomarker testing services with an ever-expanding menu of 500+ biomarkers. We adapt our assays, your assay, or outsourced methods for any intended use.

PK & PD analysis

Sample analysis, assay development and validation for full compliance with the latest regulatory demands (ICH M10, FDA and EMA guidelines).

Immunogenicity testing

Development and validation of specific anti-drug antibody (ADA) and neutralizing antibody (NAb) assays for screening and confirmatory testing.

Assay development and validation

Premium quality and custom assay development, validation, and manufacturing to support the bioanalytical demands throughout your drug development pipeline.
